Foreword

A great many people think that art simply flows from an artist's hand like sparks from a wand; that because art is emotional and evocative, it must somehow happen magically. All by itself. We hear of the Art of Hitting, the Art of Cooking, the Art of Motorcycle Maintenance, and are deluded into thinking that it *is* magic. That it is beyond the average man or woman.

In truth, art is the end result of knowing a craft so well that it becomes intuitive and spontaneous. It is the end result of years of growth, which, for most artists, begins the day their first crayon touches their first sheet of paper. A certain small amount of native talent is essential, but equally important is the desire to learn the rules, the inside knowledge, the *tricks*. Perhaps the heart and soul are the magic, but knowledge provides the incantation.

Francis Tsai is one of those magicians who knows the spells. You might almost think of the volume you hold in your hands as a spellbook, full of the newts' eyes and dragon's scales with which we artists ply our craft. Pore through this tome and you will see revealed the hidden parts of the trade: colour theory, perspective, anatomy, composition, value control and all the rest of the ingredients that go into brewing up one in-your-face monster, invoking a demon from the nether-world, or imbuing a hero with the courage he needs to slay a dragon.

Francis is a high-level sorcerer, and he has generously divulged his secrets here for you to behold. Pay close attention, study the recitations, practice them daily, and you too can do magic.

Todd Lockwood

Introduction

If you're reading this book, you have probably had at least some interest in creating fantasy art, either professionally or just for pleasure in your spare time. I am fortunate enough to be able to make a living creating artwork for the entertainment industry, and because of this I often find myself being asked questions about it. How do you get a job as a fantasy artist? What kind of pens do you use? Is it OK to use reference material? How do you know what colours to use? And so on ... My path to my current career was fairly lengthy and roundabout; I didn't take the traditional art-school route, and in fact never really learned the fundamentals of illustration in any rigorous, orderly way. It was not the easiest or best way to become a working fantasy artist, and I had to study every day to 'fill in the gaps' in my art education. After a number of years working as a concept artist in the computer games industry and as a freelance illustrator for books, comics, films and television, I have assembled a few nuggets of knowledge and some workflow routines that seem to have a certain degree of success. It is these that I want to share with you in this book.

It has never been a better time to be a fantasy artist. As I look around my studio library, I can see many examples of books and films that are fantasy related, or at least somehow influenced by this kind of imagery. Role-playing games have long been a primary source, but with all the recent advances in filmmaking technology, movies are now able to convincingly portray the kinds of worlds and beings familiar to fans of the fantasy genre. Successful films often spawn computer games and, increasingly, material can flow the other way too. This only benefits the traditional role-playing game and book markets, all of which results in more opportunities for skilled illustrators.

This book had a long genesis, which began back when I found that students and amateur artists (and even a few professionals) were asking me certain questions time and time again. I thought it might be useful to put together a list of 'Frequently Asked Questions' on my website. The more I worked on it the longer and more involved it became, because there was just so much

material to cover. With some of the topics, it was hard to convey the information without an accompanying illustration to make the point, and it quickly grew beyond that of a simple FAQ. So I set it aside.

A few years ago, I started writing some short articles about different aspects of concept art and illustration for fantasy and science fiction art magazine *ImagineFX*. A few of the points I originally had in my FAQ showed up in these articles, but I was usually at the end of my allotted word count before I could convey enough information. It was an interesting dilemma – I could present my points in a fairly focused way that was limited in scope; or I could cover a wide variety of topics in a somewhat superficial way. So, when I was presented with the opportunity to create this book, I thought it would be a great way to impart some of the tips from the original FAQ, hopefully in a manner that is both broad in scope but also specific enough to provide some useful, practical advice based on my experience.

The preliminary sketch in most illustration jobs needs to show the art director your intentions as far as pose and composition go, and also give some idea of colour and tonal value without being too detailed or finished.

TOOLS OF THE TRADE

For an illustrator, tools consist of the actual equipment used to create the artwork. Until recently, these consisted solely of some variation of pencils, ink, paint and paper or canvas. However, in the past few years digital technology has advanced to the point where it can be difficult to tell the difference between art created traditionally and that made on the computer. In addition, peripheral equipment such as scanners and drawing tablets have continued to blur the boundaries between digital and traditional techniques and media.

In my own work, I occasionally use colour media such as watercolours or marker pens – there is definitely a sort of ‘analogue charm’ these methods have that digital media lacks – but the advantages of using drawing and painting software, especially for revisions and experimentation, for me make it the obvious choice in my work.

The physical equipment is not the end of the story, though. The term ‘tools’ also refers to the skills, strategies and personal

work habits that allow an artist to create successful art. These are less obvious but just as important as the tangible tools, if not more so. These factors have more to do with an artist’s workflow, problem-solving ability and general approach to conveying information through illustrations, and it is these that this book will explore, by looking at different ways of developing a sense of character in your images, as well as maximizing storytelling, creating mood to support an idea, and numerous other strategies.

A modern illustrator's studio should contain a combination of traditional and digital tools. In my own studio, I rely heavily on digital drawing and painting software, as well as peripheral devices such as graphics tablets and scanners to aid in the creative process.

In addition, there are some other basic general practices that can be used to develop your personal toolset. Studying and sketching your surroundings – people as well as objects and environments – trains your eye and mind in observational skills. Exercises like this help to build up your mental ‘visual vocabulary’, as well as improve your ‘active observation skills’, which simply refers to your ability to analyse your surroundings. For example, rather than simply noticing that a column has bolts in it, you should study the structure to understand why the bolts are there.

Finally, creating and maintaining a reference library is essential. For real-world material, if you rely on just your memory the best you can hope for is to get close; it is guaranteed that someone somewhere will know more about the object you're drawing than you do, and will know you haven't done your homework. Short of going to see something first hand, finding and using photographic references is therefore vitally important. In the past, illustrators created what were known as 'morgue files', which consisted of images clipped from newspapers and magazines that the illustrator might find useful for reference – clothing, costumes, locations, cars, whatever was needed for a particular assignment. These morgue files

would occupy a lot of space, usually taking up several filing cabinets. So, yet another advantage of working with digital tools is that you are now able to find reference images on the Internet and store them on your computer, creating your own virtual morque file.

Copyright © Wizards of the Coast, Inc. Used with permission.

In this collection of preliminary sketches, I've created various layouts that use some of the same elements in different combinations. This would have been difficult or impossible to do with traditional materials such as ink or paint.

This page from one of my travel sketchbooks shows some notes and observations about a Mayan site in Mexico that I visited several years ago. I sketched some of the structures as they appeared, but also drew cross-section views, close-up analysis of the stonework, and an overhead view of the entire location.

FIGURE DRAWING FOR BEGINNERS

For those who have never attempted a figure drawing before, the 100 Ways presented in this book might appear slightly daunting at first. This quick step-by-step demonstration reveals the key processes you need to get you started on your way to creating amazing fantasy figures.

A quick gesture line establishes a stance for the character

Try different ideas for costume elements without making any firm commitments

Refine the design decisions, losing the less important exploratory linework

Step 1:

Begin with the Gesture

The first mark you make when laying out a figure drawing should be a single line that captures the overall stance or movement of a character. Here, I've drawn a quick **gesture line** (in red) showing a simple standing posture; the character will lean slightly to the right, resting his weight on one leg. I've gone ahead and roughly blocked in the masses of the body, head and limbs. Notice the **counter pose** of the hips to the shoulders — this shows that the body is reacting to gravity.

Step 2:

Develop the Sketch

With the basic structure in place, I've started to lay in a more detailed drawing, **indicating design elements** such as clothing details, pouches, belts and various pieces of equipment. Don't get too detailed or finalized at this stage — it's better to keep moving around the drawing quickly, not making any firm commitments until you begin to get a sense of the overall image. This is a good time to **explore different options** with the lines of the character's clothing and gear.

Step 3:

Finalize the Drawing

Once all the major decisions have been made, I've gone back over the drawing with a darker, more definite line, cleaning up the sketch and making things a bit clearer. The cloak and other articles of clothing mask the character's stance somewhat, but having the **underlying structure** firmly placed in advance helps to make the drawing work, even with the **added complexity** of costume and props.

Practice Makes Perfect

Practise is necessary in any art activity – be it dance, music or drawing. Taking the time to hone your skills will only add to your effectiveness as an illustrator and help improve the pathways between mind and hand.

Keep a Sketchbook

Many artists carry around a notebook in which to record personal sketches, studies, experiments and random thoughts. The advantage of this habit is that it quickly becomes **a catalogue of ideas and explorations** that you can revisit in the future. It can often be tempting to make every image in a sketchbook as beautiful and finished as possible – in order to make it a nice object and a work of art in itself – but a good sketchbook should contain beautiful work and rough, scratchy drawings. All illustrators love looking at other artists' sketchbooks, but their main function isn't to be shown to other people – a sketchbook serves its purpose when it becomes **a personal record** of your thought processes and ideas, and can be used to help inspire you in your ongoing work.

Documentation

Just like in school when you were asked to 'show your work', it is sometimes helpful to provide some documentation of your design processes. **Notes and sketches** like this can form a valuable part of your personal library – ideas can be reconfigured and reused in other situations as the need arises. I wouldn't recommend using finished designs this way, but preliminary and developmental sketches can often provide '**seeds**' for new ideas in other projects.

Figure Drawing

Even though much of fantasy art depicts imaginary and fantastical beings, it still needs to have a **firm basis in reality** in order to be convincing. Practising figure drawing with live models is a valuable exercise, and allows you to build up your artistic toolbox with **strong drawing skills** and **knowledge of anatomy**.

Travel Sketches

Making travel sketches forces you to **observe your surroundings** in a more engaging way, and helps you learn about the way people interact with their environment. Being able to place your figures and creatures convincingly in any setting is a valuable skill.

VISUAL COMMUNICATION

This is a concept that refers to the way in which an illustrator can convey an idea to the audience, and is one of the fundamental elements that this book will explore. The idea being communicated might be, for example, a mood, a character's personality, a sense of culture, an emotion, a conflict or an event. Once an idea for an illustration is clearly defined, the process by which the illustrator conveys and preserves the idea is known as 'visual communication'.

Techniques of visual communication include the use of silhouette, proportion, scale, texture, lighting, hierarchy, level of detail and visual cues.

Hierarchy

The primary purpose of your drawings is to **communicate an idea**. When your drawings are clear and concise, your message will come through strongly. Planning line work to **eliminate unnecessary noise and clutter**, and to provide visual cues, improves the clarity of your drawing, and hence the effectiveness of its visual communication. Heavy lines indicate important outlines and edges, and should be used sparingly. Light and medium lines indicate details and textures; these should make up the bulk of the sketch. The idea of hierarchy can also be extended to value, concentration of detail, and texture. Using all of these ideas in conjunction can result in a simple, clear sketch that fully conveys all your design ideas.

Silhouette

Character design depends heavily on silhouette, which is also sometimes referred to as **the initial 'read'** of a character. The silhouette is the largest piece of visual information presented to a viewer, and as such is more important in terms of **first impressions** than things like textures, details and colours.

Lighting and Materials

One of the basic visual communication skills is the ability to render different lighting conditions and materials. The key to indicating materials lies in how they **react to light** – reflectivity, specularity, grain and texture are all traits that can be affected by lighting.

Indication of Detail

There is a balance to be struck in terms of when and where to use detail. Creating focus is a game involving colour, lighting and detail. Implying detail often does the job as well as carefully rendering every bit of it. In some cases, it is actually preferable so that you **don't focus undue attention** on places that do not need it, or that won't help to convey your message.

DESIGN

It is important to make a distinction between visual communication – the transmission of the idea – and design – the process in which you analyse a problem and formulate a solution. In computer game and film design in particular, a very common misconception about concept art is that it begins and ends with being able to draw or paint well.

Rendering skill is certainly extremely important to be able to clearly communicate your design, but that is only part of the equation. Keep in mind that the art you generate as a character designer is not **the end product** – it is simply the means to get to the end product, which is the film, game, television programme, music video, or whatever project it is that you are involved in.

One approach to design is to break down the design task into **manageable chunks** – separate silhouette studies from pose studies and from texture and material studies. The odds are against you ‘hitting a home run’ on all those different aspects with one single drawing.

Another aspect of design philosophy to consider is the balance between 'synthesizing' and 'originating'. By originating I mean coming up with something **completely unique**, that no one has ever seen before. Besides being almost impossible to achieve, you run the risk of losing or alienating your audience. Synthesizing refers to the process of combining different **familiar elements** that are rarely used together. This provides a familiar link for your audience and at the same time presents them with something new.

Artist's Tip

WHEN DOING DESIGN DRAWINGS SUCH AS THIS ONE SHOWN RIGHT, KEEP YOUR ERASER WELL OUT OF REACH. IF YOU FIND THAT YOU'RE DOING A LOT OF RUBBING OUT AND REDRAWING, YOU HAVE ACTUALLY STRAYED AWAY FROM THE DESIGN ASPECT OF THIS TYPE OF SKETCHING.

Design Drawing

This is a term that refers to the process of ‘hammering out’ and **refining a design** on paper. This process might involve drawing different views, ‘X-ray vision’ shots and handwritten notes. Typically this isn’t something you show your audience, and it will often end up looking messy and almost incomprehensible. The goal with this type of drawing is to **explore different options** and develop an initial design idea.

EDUCATION AND TRAINING

One of the most common questions I hear is 'how do I get a job as a fantasy artist?' In truth there is no clear answer – many professional illustrators and concept artists found their way to their occupation through varied and roundabout ways. There are, however, some common elements in many artists' education and career paths that you could also benefit from.

Formal Learning

Working as an illustrator or concept artist requires a command of basic art skills and concepts, which can be obtained in a good, well-rounded art education. The type of learning you undergo will have an influence on your chances of success. In my mind there are two basic educational paths available that provide **a solid foundation**. First is an illustration-based education, which is one that concentrates on traditional art skills such as drawing and painting, colour theory, anatomy and perspective. This tends to be **an observational and documentary approach**, where students learn the skills necessary to reproduce what they see in real life in a variety of media. The second consists of a design-based education, which would include areas such as industrial design, product design, graphic design and architecture. This typically trains students in certain aspects of **visual communication** common to each field of study, but usually not to the extent that would be found on an illustration course. However, in the last few years, some courses have begun to appear that blur the boundaries between the two. Computer game design and entertainment design are now available as options for those seeking higher education, which can lead directly into careers in fantasy and science fiction art. An education in studio art techniques and/or art history can also be a great help in pursuing this line of work.

At first glance it might seem that an illustration-based education is much more useful for a career as a fantasy artist, but a design education can provide some very useful skills for a fledgling illustrator too. My own educational background is in architecture, and one of the most beneficial lessons I learned from it is knowing how to **formulate a design problem** so that I can then determine **a clear and effective solution**.

Developing Personal Strategies

As a fantasy illustrator, you will often be called upon to visualize people, objects and creatures that don't exist, or that are fantastical amalgamations of real, existing things. Because of this, an education in traditional art skills will benefit greatly from exposure to other fields of study too. As an artist or designer, the more **'visual vocabulary'** you have to draw upon, the better. Exposure to influences outside your primary area of interest is necessary in order to build up this mental library. The best way to accomplish this (and it is a never-ending process) is to expose yourself to as many different ideas and visual stimuli as possible. All artists tend to draw what they know, so expanding the database of 'what you know' makes you more versatile as an artist, giving you a broader range of material to draw from.

Travelling is a great way of gathering new material for your visual vocabulary. Experiencing life, seeing different environments and observing human behaviour in a variety of situations, will all help stock your mind with reference data for your fantasy illustrations.

CHALLENGES FOR THE WORKING FANTASY ARTIST

One of the keys to success as an illustrator is being able to balance the familiar with the unusual. In other words, as a commercial artist part of the job is being able to create artwork that an audience can relate to. There is a certain level of expectation you have to meet in order to successfully sell your artwork. At the same time, in order to stand out among the many thousands of artists working in the same field, you have to be able to bring something new to the mix.

It is very difficult to reliably come up with brand new, completely original ideas and concepts for every art job you happen to get. The strategy I have found some success with is to **introduce a new 'spin'** on an otherwise familiar subject. There are different ways to accomplish this. They include: combining influences or images that are not commonly associated with each other; introducing a single strange or alien element to otherwise very familiar imagery; or playing with an audience's expectations in clever and unexpected ways.

Along with developing tools and strategies such as those already discussed, it is also necessary to pay attention to the work being done by others in your field. You have to stay abreast of the kinds of imagery that seem to be making the biggest impression on your audience, what styles appear to be on the wane, and what kinds of things feel like 'flavour of the month'. This is not to say that you should always be chasing the market with your style; it is important to find and then maintain and develop **your own voice** in your artwork. The bottom line is that as you do this you should also be constantly aware of the environment and market you are working in.

Working with an art director at a large publishing company like Wizards of the Coast (for whom this image was created) is a collaborative process. As an illustrator you are being hired for your ability to visualize fantasy worlds and characters, but you do not have total freedom to draw or paint whatever you want. The art director usually has a list of requirements from a number of different parties, and creating an illustration becomes at least in part a problem-solving exercise, where you are trying to find the best way to satisfy many (sometimes conflicting) conditions.

Copyright © Wizards of the Coast, Inc. Used with permission.

Images like this can sometimes be used large, as game covers, but more often will end up as trading cards for games such as 'Magic: The Gathering'. Although the final art for these cards is very small, sometimes as little as an 4cm (1½in) wide, the same care and attention goes into each of these illustrations.

One of the first things you have to establish for yourself as you begin a project is the '**big picture**'. Your client may have some ideas about mood or a certain character, or perhaps he wants magical flying armoured hippos in his game, just because he thinks they are 'cool'. As the artist hired to bring this vision to life, you have to be able to take a step back and perceive the project as a whole, so you know what parts are truly important, and what parts obscure the big picture. Do flying hippos fit into the world you are creating? If not, what kind of spin can you put on them so that they make

sense with your vision? This could involve a lot of **thinking and research** on your part, even before you put pencil to paper.

This book should in no way be considered as a replacement for a good art education or experience in the field – it is simply one working illustrator's collection of ideas and strategies; things that seem to have worked consistently well for me in the past. My hope is that it can provide you with some useful **information and inspiration** on your path to becoming a successful fantasy artist.

Understanding the Basics

Any creative endeavour has a greater chance of success when it is built on a solid foundation. For an illustrator or character designer, a sound footing comprises some basic knowledge and a number of different competences. This section looks at some of the fundamental tools and skills any artist should have in his or her visual toolbox, and will also define some important concepts.

Illustration inspired by the Hindu goddess Lakshmi, goddess of wealth, fortune, love and beauty.

001 Play with Body Proportions

Heads for Heights

The term '**proportions**' refers to the relative sizes of different parts of a character's body. For fantasy figures, you can obtain some visually interesting results by altering some of the **dimensions** of a normal human body. One way to look at this is to split up a character's vertical height into **units** based on the length of their head. Most real people have proportions of roughly six heads to their height. By increasing the number of head-lengths in a character's stature, he or she can be made to feel more **heroic** and larger than life. On the other hand, a character that is fewer heads tall exhibits more of a **humorous** or endearing style of heroism.

Artist's Tip

THIS 'HEADS' MEASUREMENT IS ONLY INTENDED TO BE USED AS A ROUGH, GENERAL RULE-OF-THUMB. UNLESS THE CHARACTER IS DEPICTED STANDING STRAIGHT UP AND FACING THE VIEWER, IT CAN BE DIFFICULT TO BE PRECISE ABOUT THE NUMBER OF HEADS IN THEIR PROPORTIONS. THE BEST INDICATOR OF SUCCESS IS THE FEEL - ALWAYS ASK YOURSELF, DO THE CHARACTER'S PROPORTIONS CONVEY THE SENSE OF PERSONALITY OR PHYSICALITY THAT YOU ARE GOING FOR?

Ideal Head and Face

Just as there are ways to distort the body proportions of your characters (see page 20), the **dimensions and size relationships** within their facial features can also be altered to suggest different personality traits. To begin with, study the **proportions** of an ideal head and face so that you know how to deviate from it when desired. The head in profile view fits roughly inside a square. If you examine the features in the front view, you can see that the head tapers gently from the dome of the skull to the bottom of the chin, and that the face is approximately the width of five eyes. A triangle drawn from a point between the eyes to the widest points of the mouth can be used to determine the width of the nose.

Subdividing the square into four smaller, equal squares establishes some important landmarks, such as where to place the eyes and ears

The head is more elongated in front views and does not completely fill the square

The distribution of the features from the front view tends to fall into a specific symmetrical geometry

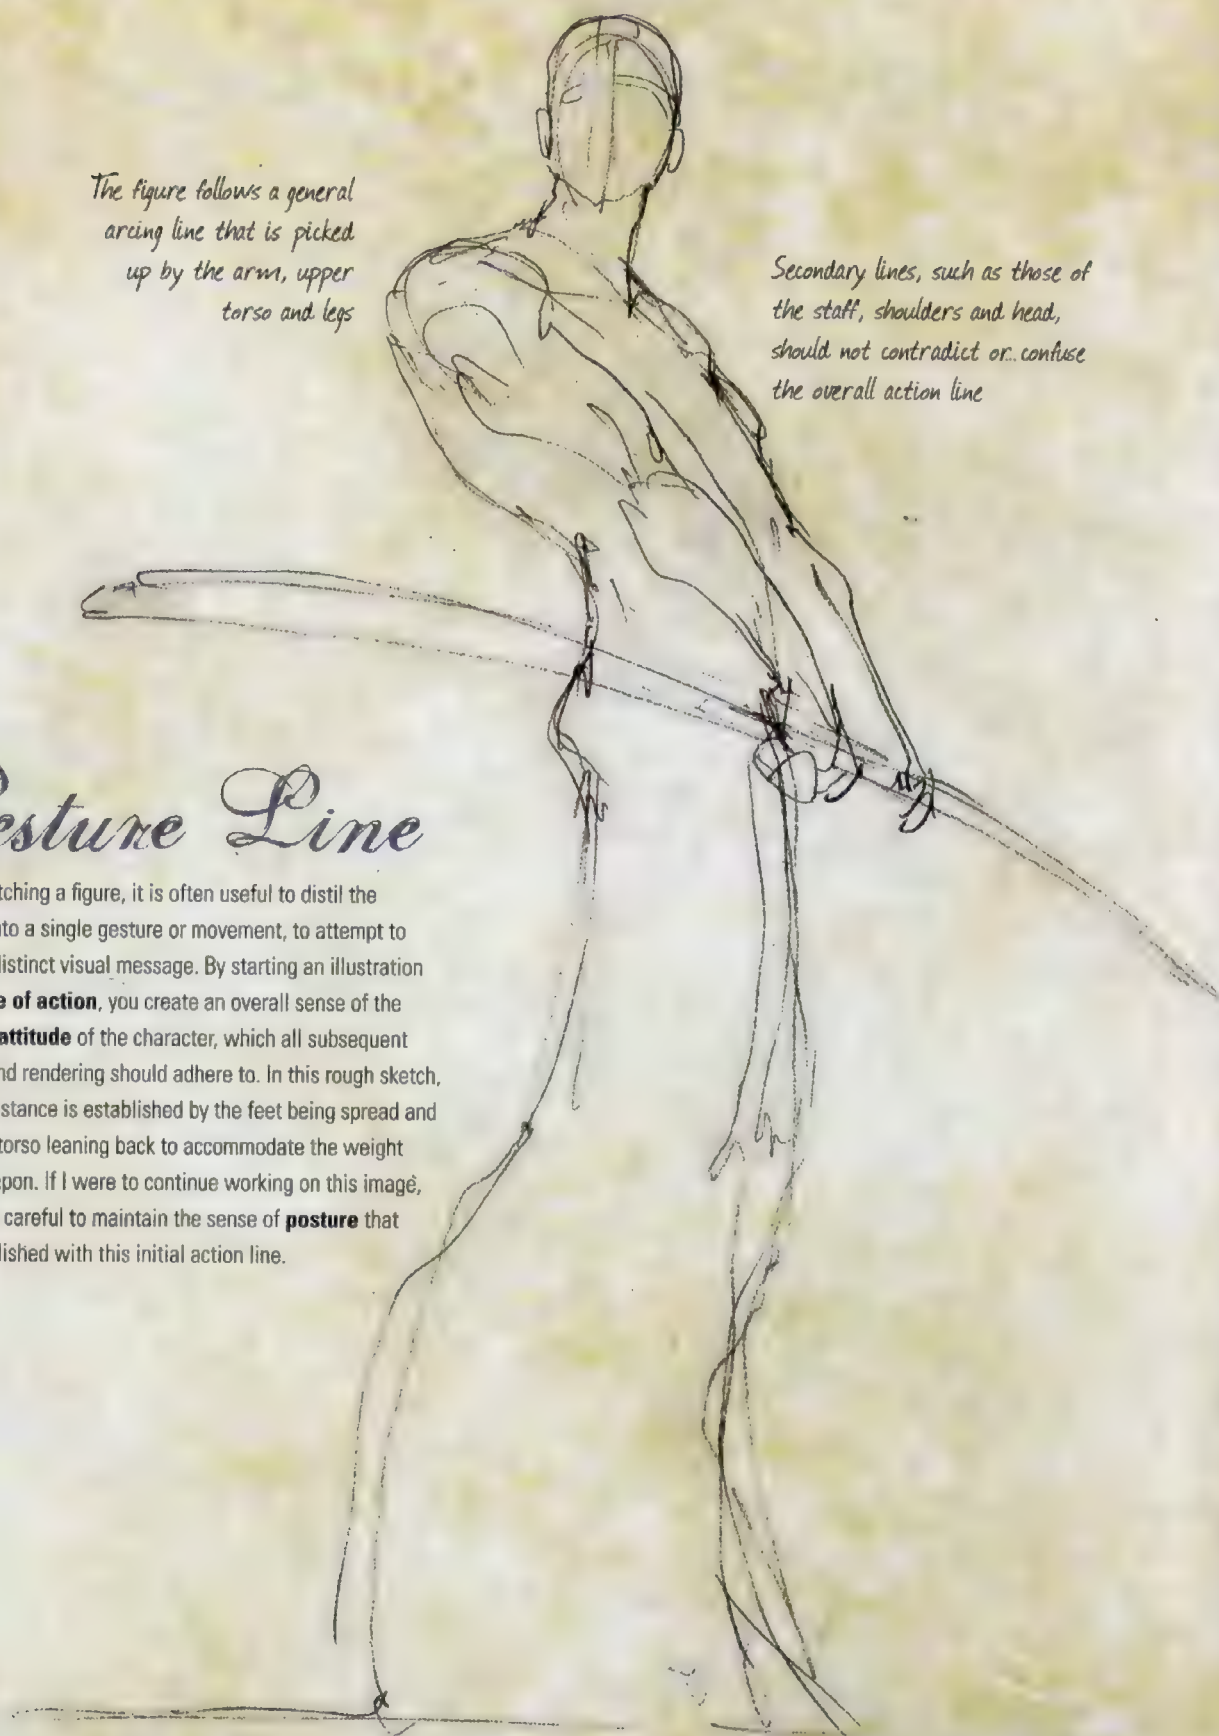

003 Start with a Line of Action

The figure follows a general arcing line that is picked up by the arm, upper torso and legs

Secondary lines, such as those of the staff, shoulders and head, should not contradict or confuse the overall action line

Gesture Line

When sketching a figure, it is often useful to distil the drawing into a single gesture or movement, to attempt to convey a distinct visual message. By starting an illustration with a **line of action**, you create an overall sense of the motion or **attitude** of the character, which all subsequent drawing and rendering should adhere to. In this rough sketch, a decisive stance is established by the feet being spread and the upper torso leaning back to accommodate the weight of the weapon. If I were to continue working on this image, I would be careful to maintain the sense of **posture** that was established with this initial action line.

Use Contrapposto

004

The position of the head is often a good indicator of the 'personality' of the overall pose. The tilt/turn of the head conveys much of the information contained in body language

The red lines in the illustration correspond to the angles formed by certain paired elements in the human body. Lines drawn through the shoulders, hips and knees show how the body responds to gravity when the centre of mass is shifted

Counter Pose

In life, people rarely carry themselves in a perfectly symmetrical, rigid state – more often, they lean to one side or another, or rest their weight on one leg. Bringing this **sense of reality** into your character design can help convince the viewer that your character is a living, breathing personality. One way to do that in an illustration is to use **contrapposto**, an Italian word meaning 'counter pose'. In this illustration, the lines through the hips and the shoulders tip in opposite directions – the character shifts her weight to her left leg, using the right leg as a brace. She tips her upper body to the left so her **centre of gravity** is over the supporting leg. The result is a **dynamic pose**, which gives a strong indication of the character's confident attitude.

005 Explore Foreshortening and Perspective

Copyright © Wizards of the Coast, Inc.
Used with permission

Irthica Vane

When you see people in real life, only occasionally will they be standing directly in front of you. More often than not, some part of their body is turned away from you, or towards you, creating a situation where the limbs or torso are viewed at such an angle that certain body parts are **obscured** by those elements closer to you. This perspective effect is known as **foreshortening**. Figures in motion or in some kind of **active pose** will almost always exhibit foreshortening in some part of the body. This can be a very useful tool in generating **interesting shapes and silhouettes** in your illustrations, and in general results in more engaging images.

Molydeus

The **Colour Wheel** might already be familiar to you if you have read art books or taken a painting class. It is the relationship between the colours on the wheel that interests illustrators. Colours directly opposite each other are called '**complementary**' and, when used together in the right combination of saturation and intensity, can add vibrancy to an image. In this illustration of a two-headed monster, the figure is primarily red, as is the majority of the ground underneath him. The backdrop is rendered in varying shades of green, which is the complementary colour to red on the wheel. As the green shades are more muted and less saturated, they become **secondary** to the bright and dominant red. This allows the character to stand out more dramatically from the rest of the scene and creates a visually intriguing '**vibration**' between the foreground and background colours.

Having a small Colour Wheel to one side as you are working can be a handy reference to help keep your colour strategy clear.

Copyright © Wizards of the Coast, Inc.
Used with permission.

007 Indicate Form with Lighting

Lakshmi

Lighting is a critical tool in communicating ideas visually. Not only can lighting create a certain mood, it can also provide a means of **indicating form** in a very unambiguous way. The lighting scheme in this illustration consists of a cool green light coming in from the left, and a warm orange secondary light source from the right, possibly reflected from a red surface outside the frame of the picture. Having light sources coming from different directions like this creates **core shadows** on the forms, where the surfaces turn away from either light source. The gradation from cool lit surface to dark shaded surface and back to warm lit surface tells the viewer the shape of the object. The key is to **keep the lighting 'logic' consistent** throughout the image.

The darker value separating the surface lit by the main light source and the surface lit by bounced light is called a **core shadow**.

Combine Lighting and Colour Theory

008

Black Dragon

The previous two pages have explored the principles of using first colour and then light. Once you have understood these two basic concepts, you then need to appreciate how to make them work together for a successful, finished image. Establishing a **definite lighting scheme** in your painting is essential for being able to convey information clearly. Taking this strategy further, combining a lighting scheme with the principles of colour theory can **improve the clarity** of your paintings. You can contrast warm source light with cool bounced or secondary light, or alternatively create mixed light sources using complementary colours. In this illustration, warm red-orange light from below balances the cool green light from above.

Using complementary colours as a basis for the lighting design adds vibrancy to an image.

Used with permission.

009 Remember that Style is not Design

Vamp

A critical concept to keep in mind is not to confuse **rendering style** with **character design**; when drawing figures it is important to be able to distinguish between illustration and design. This illustration is done in a very graphic, cartoon-like style, but the fundamental design elements of the character (hairstyle, tattoos, the lines of her clothing, etc.) are not dependent on how the illustration was created – the **character design should be recognizable** whether it is drawn as a cartoon, painted in oils, or created as a 3D model for a computer game. Rendering style can help reinforce a **design statement**, but the basic design should be able to stand apart from the manner in which it is illustrated.

Green is the 'spot' or key colour here; the other colours are subservient to it

Copyright © Wizards of the Coast, Inc.
Used with permission

If all the colours are used in a fully saturated way, the result is garish and unfocused.

Used with permission

Saturation Point

With digital painting software, it can be tempting to lay down a lot of colour and this makes it easy to end up with an oversaturated image. That's not to say saturated colours are never appropriate, but **moderation** is usually a good idea. One simple approach is to determine a **dominant colour**, and keep other shades more subdued. In this illustration, two versions of the same image are shown with different **levels of saturation**. On the left, most of the image is fairly desaturated, and the vivid green of the tentacle 'pops', making it a focal point. On the right, saturated colours have been used all over the image, reducing the impact of the green tentacle. Also, blue and red, two of the three primary colours, have been used at an almost equal intensity. There is no hard-and-fast rule saying that you shouldn't do this, but unless it is a **deliberate design decision** it is better to avoid it.

Understanding the Basics

Illustration and design can be done in a variety of different media and using a number of techniques. Most of the artwork in this book takes the form of either coloured line art or tonal paintings, or a combination of the two. Line work has the benefit of being **quick and iterative**, requiring less of an investment of time. Line art can be used to **indicate detail and texture**, which might sometimes be more labour-intensive

030

Separate Character Design 012 from Composition

Fallen Kings Layout Tests

Breaking up the illustration task into more **manageable parts** makes the overall task much easier. Rather than designing the character as you are deciding on the composition, try to have at least a rough idea of the form the character will take before laying out the final illustration. These colour sketches show different attempts to create a composition featuring a three-headed beast (see page 50 for the finished illustration). Importantly, the character design had already been completed at this point, which allowed me to **concentrate** solely on the effect achieved by different arrangements.

013 Differentiate Between Illustration and Documentation

The process of creating an accurate turnaround drawing will involve moving back and forth between views, correcting minor geometry errors

Copyright © Wizards of the Coast, Inc.
Used with permission

This is a valuable exercise in refining and documenting a character design, and can reveal inconsistencies or design flaws that are not always apparent in a sketch

Winged Succubus Turnaround Drawing

On page 28 the distinction was made between illustration and design. To reiterate, illustration generally comes after the character has been conceived, while design is largely a mental process in which you determine the character's features and **employ visual tools** to communicate those ideas. The term 'documentation' refers to the type of drawing that is intended **solely to present design information** for use in another medium. Most of the images in this book fall into the category of illustration, and are intended to convey a range of factors including mood, action, location and emotion. A documentary piece should be devoid of these 'extras', with the sole aim being to provide an outline for another party, such as a sculptor or digital 3D modeller, with **little or nothing left to interpretation**, so that an accurate model of the character can be created.

Appreciate the Value of Line Weights

014

The King and Queen

With painting, it is possible to indicate a huge variety of materials, textures and colours, but how can you convey the same kind of information with a line drawing? Compared to painting, line art has a somewhat limited ability to transmit your message; however, one aspect that you do have great control over is line weight. By **varying the thickness and strength** of the lines that make up a drawing, it is possible to communicate a fairly large amount of information. In this illustration, thick lines are used to indicate edges of forms, where one edge overlaps another. Lighter-weight lines are used to suggest textures, folds and materials and are much more abundant than the heavy strokes. In general it is better to **be sparing with the thick marks** – overusing heavy lines undermines the impact of the other lines and can result in a messy, unintelligible drawing.

Researching the Character

A lot of work goes into creating a good fantasy illustration before the artist even puts pencil to paper or makes the first mark on the screen. This section looks at the background work you can do to gain a clear idea of who your characters are and the nature of the world they live in, which will make the design process easier and more enjoyable. It is not necessary to have every last detail determined ahead of time, but rather just the main landmarks – personality traits, occupations or character archetypes – that will provide you with a definite direction and end goal.

Copyright © WotWot of the Coast Inc.
Used with permission

The creature in this illustration comprises a number of established figures in the fantasy mythos – creating this image required a significant amount of research and gathering of reference material.

015 Establish the Character's Story

Ghost Battle in the Lost Empires of Faerûn

One very effective way to begin a figure design task is to conceive the character's story. A **narrative can come from any aspect** of a character – culture, occupation or history – depending on what kinds of things you want to emphasize in your illustration. Creating a story for your characters helps to solidify them in your mind, making them seem more real. Having a sense of where your characters came from, what their values are, how they would react in certain situations, even what they like to have for breakfast, is helpful in many different ways. Some of these factors may never appear in the image, but they are important because they help to **create a complete sense of the character** as a living and breathing personality. This sense of story will almost always come through in the final illustration.

Understand the Character's World

016

Copyright © Wizards of the Coast, Inc.
Used with permission

Sands of Anauroch

One of the most important things to determine is the kind of world that your character inhabits – time period, climate and customs. Just like in real life, these factors have a significant effect on someone's **general appearance**. Having a deep understanding of the world your character comes from provides you with **ready answers** to many of the questions you will be asking yourself as you draw. This illustration, created for the fantasy role-playing game 'Dungeons and Dragons', shows a very specific society made up of nomadic desert dwellers. Rather than concentrating on a single figure first, I've shown a fairly large slice of the world that the characters inhabit. Creating imagery like this can help **maintain a 'big picture' sense** of their world, which is a tremendous advantage in the design of an individual character.

Exploring different conditions in the same environment can be helpful in firmly establishing the nature of a location in your mind.

Copyright © Wizards of the Coast, Inc. Used with permission

017 Decide on the Character's Occupation

The Pink Conch

In the same way that knowing about a character's world can provide you with many clues in designing a **convincing individual**, knowing how a character spends most of their time and energy can also be a valuable source of **visual inspiration**. In fantasy stories and games, main characters are usually some form of adventurer, but aside from the heroes and supernatural beings, there are plenty of townspeople, merchants, clerics and other **supporting roles** that you might like to illustrate. In this recent illustration for *Wizards of the Coast*, I was asked to provide an image of three sex workers at the Pink Conch bordello. Their occupation has informed the design of their provocative costumes and 'come hither' expressions.

Artist's Tip

ALTHOUGH YOU ARE DEALING PRIMARILY WITH FANTASY ELEMENTS, BRINGING IN REAL-WORLD VISUAL CUES (BY REFERENCING IMAGES AND DESIGNS FROM REALITY) CAN HELP MAKE YOUR IMAGES MORE CONVINCING. HOWEVER, YOU DON'T WANT TO FOLLOW FACTUAL REFERENCES TOO CLOSELY, SINCE DOING SO HAS THE POTENTIAL TO TAKE THE VIEWER OUT OF THE WORLD YOU ARE CREATING. INSTEAD, THE INTENTION SHOULD BE TO REMIND THE VIEWER RATHER THAN EXPLICITLY 'QUOTE' FROM REAL-WORLD INSPIRATION.

Drow of Praxirek

One important concept to keep in mind as you work is the culture of the character. Try to imagine the world that the character inhabits, and picture the **cultural aspects peculiar to that character**. For example, in this illustration the spider motif has been used in the drow clothing and armour designs. The choice to use spider and web imagery for drow characters is not an arbitrary one – it is a direct expression of certain elements of the drow culture, specifically the subterranean origin of the drow elves, their affinity for the arachnid creatures found there, and even one of their religious icons, Lolth the Spider Demon Goddess. Incorporating the character's culture into the illustration will bring **added depth and meaning** to the piece.

Copyright © Wizards of the Coast, Inc.
Used with permission

019 Keep Your Message Clear

Mordak Brellian

Part of the task of creating a successful character involves **removing or minimizing details** and design elements that contradict or confuse the message. The more the various ingredients in the illustration contribute to a **coherent whole**, the clearer the meaning will be to the viewer. In this image of a sorcerer, the costume and prop design are **simple and consistent** with a person who attacks and defends himself using magic alone. He does not wear heavy armour, or carry a sword, a knife or other weapons and equipment. These are factors that would have contradicted the notion that the character is primarily a user of magic, and would create **ambiguity** in the image.

Copyright © 2000 Wizards of the Coast, Inc.
Used with permission

Make Notes to Organize Your Thoughts

020

Notes on a Monster

Using written notes to **record your ideas** is a very useful but sometimes overlooked step in the character design process. When starting out on a new idea, notes can be used to log fragments of designs that may not have a clear visual representation yet, or suggest **different directions** to investigate later. You've heard the phrase 'a picture is worth a thousand words', but sometimes written comments can be worth a few pictures too. Notes can serve as reminders without committing to **specific design choices** too early in the character's development.

021 Know Your Audience

Artist's Tip

KNOWING YOUR AUDIENCE NOT ONLY MEANS UNDERSTANDING WHO IS LOOKING AT YOUR WORK, BUT ALSO WHAT OTHER MATERIAL THEY ARE BEING EXPOSED TO. PART OF THE JOB OF RESEARCHING AN ILLUSTRATION OR DESIGN TASK IS TO LOOK AT OTHER SIMILAR WORK IN THE PARTICULAR GENRE AND STYLE IN WHICH YOU ARE WORKING. THE INTERNET IS EXTREMELY USEFUL FOR THIS KIND OF RESEARCH, AS IS GOING TO BOOKSHOPS AND GETTING A FIRST-HAND LOOK AT THE KIND OF ARTWORK THAT IS ALREADY ON THE SHELVES.

Little Orc

If you are aware of the people who will be looking at your work, you can keep them in mind to help with **decision-making** as you design. For example, if you are creating characters that will be seen by young children, it pays to favour clean line work, simple shapes and forms, and bright colours. If on the other hand your audience is older – teenagers or young adults – a more detailed, complex art style is more appropriate. In this image of a young orc-like creature, I have deliberately chosen a **simplified style** that is not hyper-realistic or overly grotesque. My intention was to create a fantasy illustration that would provide a way for people not familiar with fantasy art (such as young children) to relate to the character.

Explore Character Archetypes: Death

022

Your Task Awaits

The image of Death as a sentient being exists in almost all cultures. In Western society, he is most often known as the 'Grim Reaper' and is associated with skull or skeleton imagery, symbolizing the decay of the body. Scythes and **dark hooded robes** usually accompany this archetype. The most compelling quality of the Death character is the **sense of the unknown** that he conjures, forcing us to question whether something exists beyond life. Invoking this quality by hiding the face or obscuring the eyes so that **expression is unreadable** is critical in any portrayal of Death.

Copyright © Wizards of the Coast, Inc.
Used with permission.

023 Explore Character Archetypes: The Wizard

Sorcerer

The wizard archetype is well known in the fantasy world. The genre is often referred to as 'Sword and Sorcery', which indicates just how important the magical aspect is within it. The wizard or sorcerer character is often depicted as **an older, scholarly figure** who has devoted his life to the study and practice of his craft. Rather than depend on his physical abilities in an adventuring career, he has chosen to develop his mind in order to master the magic arts. The key strategy in illustrating a wizard is to make some sort of **visual reference** to his reliance on powers beyond his bodily capabilities

Artist's Tip

SPECIALIZED 'CUSTOM' PAINT BRUSHES CAN BE CREATED FOR INSTANCES WHERE YOU WILL WANT TO USE CERTAIN KINDS OF IMAGERY OVER AND OVER AGAIN. FOR THIS WIZARD ILLUSTRATION I USED VARIOUS CUSTOM 'ARCANIC SYMBOL' BRUSHES CREATED BY ARTIST STEPHANIE SHIMEDOLA. FOR MORE INFORMATION, GO TO WWW.BRUSHES.OBSIDIANDAWN.COM.

Explore Character Archetypes: The Holy Man

024

Preacher

Although there are some similarities between this archetype and the wizard character, there are also crucial differences. Usually the holy man appears as a **patriarchal authority figure** representing a religious or clerical movement or institution. Like the wizard, his power comes from something greater than himself, but in this case it is not magic but God. The holy man acts as a conduit for **supernatural and metaphysical powers** and can be depicted with some artefact or symbol of the weight of his office. This might be a staff, religious item or icon, or a **consecrated weapon** such as this preacher's sword

This holy man has a serene, calm air to him, but personality is not tied to a particular archetype. A fiery, angry character with a much more intense expression could also work for this archetype.

025 Explore Character Archetypes: The Holy Woman

Copyright © 2006 Blizzard Entertainment, Inc.
All rights reserved

Night Elf Priestess

The female holy character is similar to the male version, but while the holy man takes on father figure roles, the holy woman represents the **maternal aspect**. Like the holy man, the holy woman or priestess derives her power and accoutrements from her station as a representative of a larger, more powerful and authoritative institution. In a similar manner to her male counterpart, the holy woman can express her station by wielding or displaying some **object or artefact** of her religion.

Explore Character Archetypes: The Sorceress

026

Telepath

A popular character archetype that often appears in different fantasy settings is the goddess/sorceress/earth mother figure. This character is the female counterpart to the wizard/sorcerer archetype and is similar to the priest/priestess character. Like the wizard, the sorceress often possesses a power or ability rarely found in the general population, and has honed this ability through a lengthy period of study or apprenticeship. Her choice to pursue this path might have been influenced by an **inherent quality or skill**. In this illustration, the character depicted is a telepath – she was born with a certain talent for **mind control**, which had to be nurtured and trained in order to develop fully. The formal stance and obvious concentration of the character suggests a **high level of discipline**.

027 Explore Character Archetypes: The Hero

Gorok the Brave

The hero is the character that most people identify with, and is consequently the archetype that is most **open to interpretation**. In theory, the hero of a fantasy story can come from any of the other character archetypes, but in most cases the typical hero is more of a generic or 'everyman' character. This allows an audience to relate to him by imprinting something of their own identity on to the character. A hero is often

defined by his quest, wherein the adventures he experiences cause him to change in some significant way. The hero's main quality – for example, physical strength, skill with a particular weapon, or a special ability such as communicating with animals – should be expressed with utmost clarity. Probably more so than the other archetypes, the hero's key '**selling point**' cannot be complicated or obscured.

Explore Character Archetypes: The Jester

028

Duvon the Strange

In any story, be it a film or a graphic novel, it is often useful to create a secondary character to work with the primary roles. The jester or comic figure usually accompanies the hero and acts as a **humorous foil** or narrative device, providing a **mechanism for exposition** in situations where the hero on his own might be too limiting. In the same way that adding a spot of complementary colour can add a visual spark or increased vibrancy, injecting a small element of humour can provide welcome relief in an otherwise grim or morbid storyline. **Facial expressions** are key to creating this comedic appeal in a character, with sparkling eyes and infectious smiles top of the agenda.

Artist's Tip

SOME CHARACTER ARCHETYPES RELY MORE HEAVILY ON DIALOGUE AND NARRATIVE INFORMATION. IN CASES SUCH AS THIS, IT CAN BE USEFUL TO IMAGINE SHORT SNIPPETS OF DIALOGUE OR ACTION THAT HELP TO DEFINE WHAT THE CHARACTER IS ABOUT. WITH CERTAIN CHARACTERS I'VE SOMETIMES FOUND IT HELPFUL TO IMAGINE WHAT THEIR VOICE OR ACCENT MIGHT SOUND LIKE, HOW THEY SPEAK, AND SOME UNIQUE TURNS OF PHRASE THAT THEY MIGHT USE. TECHNIQUES LIKE THIS HELP YOU TO GET INSIDE A CHARACTER'S HEAD AND FILL OUT THE CONCEPT.

029 Explore Character Archetypes: The Beast

Copyright © Wizards of the Coast, Inc.
Used with permission

The Beast of Fallen Kings

An archetype that frequently appears in fantasy stories is that of the beast. These **intelligent monsters** are usually based on real-life animals, and a particular creature can be chosen to represent a specific character trait or personality – for example, owls are often equated with wisdom, monkeys with mischief, hyenas with cowardice and sloths with slowness or laziness. In certain cases, a combination of different animals

can be used to convey a dramatic, **complex character type** such as in this illustration, which shows a beast comprising parts of a tiger, a ram and a black dragon. This sort of character design has **precedents in Ancient Greek mythological beasts** such as the multi-headed Hydra, or the three-headed, snake-tailed hound Cerberus who guarded the gates to Hades.

Explore Character Archetypes: The Ghost

030

Copyright © Wizards of the Coast, Inc.
Used with permission.

The Forgewraith

Apparitions, spirits, wraiths, phantoms, spectres and other **ethereal beings** have long been a part of many of the world's myths and stories. In the fantasy realm, ghost figures or undead creatures, such as the Forgewraith, often exhibit powers or flight, incorporeality and other **supernatural abilities**. Successfully illustrating a ghost can usually be accomplished by indicating one or more of these factors – by showing the character floating, moving through solid objects or changing shape.

Although the ghost figure is incorporeal, creating a design with a face (or something serving a similar function) gives the viewer a way to relate to the creature as a distinct personality.

031 Explore Character Archetypes: The Beast Man

Galekeeper Mystagogue

Fantasy stories are well known for their portrayal of the archetypal beast-man, which includes creatures such as orcs, goblins and trolls. The beast man is usually depicted as an **inferior form of human**, or sometimes a combination of man and brutish animal, with slightly **lower intelligence** than a normal person. This archetype can be represented by adding one or two visually dramatic components, such as tusks, lizard-like skin, horns or claws, to a humanoid body shape.

Explore Character Archetypes: Familiars

032

Copyright © Wizards of the Coast, Inc.
Used with permission

Symbionts

Fantasy characters, in particular witches, sorceresses or other users of magic, will often be accompanied by **intelligent creatures** known as familiars. Sometimes these familiars might be recognizable real-world creatures (although they should exhibit behaviour quite unlike their natural counterparts), or, as in this illustration, they can take the form of monstrous or unusual creatures. Including a familiar alongside your primary character provides another outlet for expressing a **particular personality trait**, which is especially useful if the character in your scene already has a complex story.

Artist's Tip

COMBINING VISUAL CUES FROM DIFFERENT, UNRELATED SOURCES CAN SOMETIMES RESULT IN SOME INTERESTING AND UNUSUAL-LOOKING CREATURES. ARTIFICIAL OR MANMADE MATERIALS SUCH AS MOULDED RUBBER OR ANODIZED METALS HAVE SPECIFIC REFLECTIVE AND COLOUR QUALITIES THAT ARE NOT NORMALLY FOUND IN NATURE. RENDERING CREATURES WITH MATERIALS LIKE THIS CAN GIVE THEM A SURREAL, OTHERWORLDLY APPEARANCE.

033 Explore Character Archetypes: The Winged Character

Succubus

In the fantasy genre, characters with wings are almost as common as characters possessing other animal traits, and in some cases more so. If human flight were a reality, in order to support the weight of even a small person, the wings would have to be incredibly large. Try to acknowledge this **physical requirement** by making the **proportions** of a winged humanoid character approximate to those of a real-world flying creature, such as a bird or a bat.

Explore Character Archetypes: The Golem

034

Copyright © Wizards of the Coast, Inc.
Used with permission

Iron Watch

The word 'golem' has its origins in Jewish folklore, and refers to a creature that is **created from inanimate matter**. This type of character appears in both fantasy and science fiction genres. In the fantasy world, golem-type creatures such as the three 'war-forged' characters in this illustration, usually have **supernatural origins**, brought to life from inert materials by a wizard or other magical character. Any depiction of a golem should exhibit the **physical scars** that show it has been artificially created or assembled; for example, seams, stitches, mechanical joints or other **signs of construction**.

The presence of what looks like a key/lock device, along with the rivets and plates, reinforces the idea that these creatures are mechanical rather than natural beings.

Establishing a Process

There are numerous design strategies that can be used to help flesh out your fantasy characters. The tips in this section discuss ways in which your initial ideas and concepts can be developed and refined on paper or on the screen, exploring and evaluating different directions you might like to go in. These are not limited to specific types of characters, but can be applied to many different situations.

The Aboleth is a sea creature whose design draws inspiration from real-life animals, but is clearly a creature of fantasy.

Copyright © Wizards of the Coast, Inc.
Used with permission

035 Create a Visual Hook

Establishing a Process

Copyright © Wizards of the Coast, Inc.
Used with permission.

The use of red as a spot colour recalls a spider's multiple eyes, or the markings on specific kinds of spiders, such as the hourglass shape on a black widow.

Drow High Priestess

One way to approach character design is to find a major visual 'hook' or **distinguishing characteristic** that a viewer is able to identify and recognize easily. This can also serve as a **mnemonic device** to remind us of the character's pertinent back-story or other critical information. The hook in this illustration is the drow priestess's costume, which is heavily based on the spider motif so crucial to drow culture (see page 39). She has web patterns over her skirt and boots, and the angles and lines in the costume, including the gloves and headpiece, **reinforce the shapes** formed by the webs. Finally, a spider graphic in the background bolsters the theme.

Determine a Visual Hierarchy

036

Creature Design Sketches

No faces or distinct heads - alien forms

Combinations of sharp 'beaks' with more amorphous, sac-like shapes

Recognizable design elements in the means of locomotion - many opportunities for enhancing the alien feel through how the creature moves

Creating visual hooks in a character design is helpful for establishing a solid, memorable identity. However, these **hooks should be limited** to two or three at most, as too much information can cloud your message. Determine which of these features is the most important, and **keep this hierarchy in mind** when designing the character. In this set of sketches for a semi-intelligent, slow-moving plant-like creature, I've explored several directions: variations on silhouette, from tall and skinny to more rounded and pear-shaped, floating versus legs, distinct head and limb shapes versus a more amorphous form. Using all these different design elements on a single illustration would result in a weak, unmemorable image. Having generated these sketches, I now need to decide which two or three aspects feel most appropriate, and of those which is **most important visually**.

039 Harness the Power of Silhouette

Establishing a Process

Mythical/religious figure but portrayed in a fairly realistic fashion

Human-like proportions help to emphasize the fantastic nature of his appearance

Ganesh Studies

One of the primary ways in which we recognize a character is through its silhouette. This is the **main graphic 'read'** of a character, over and above details, textures and to a certain extent even colour. From a distance, textures and details are obscured, and lighting conditions can affect how colour is perceived, but rarely will a character's silhouette be altered by environmental conditions. A silhouette can be **transformed** by many different factors, such as clothing, tools or weapons, body style, or even body parts like horns, tails, hooves or wings. This set of thumbnails shows some explorations of silhouettes for a painting of Ganesh, the Hindu god. Ganesh is an established figure with certain aspects that I wanted to explore and experiment with; the mixture of human and elephant forms, the extra arms, and various instruments and artefacts.

Hand gestures (mudra) associated with Buddhist figures add another layer of interest in the silhouette

Aboleth

In some instances, a character or creature in a fantasy setting will be alien or amorphous enough that it can become difficult to get a sense of the character's physiology or the logic behind its design. In a case like this it can be helpful to **include certain landmarks** or points of reference, so that a viewer can perceive some sort of order. For example, in this design for a large creature called an Aboleth, I have

relied on a few **familiar visual cues** to enable the viewer to understand the form of the creature. Symmetrical features like the eyes, the paired sets of tentacles and the triangular fore-fins tell the viewer that the creature possesses **bilateral symmetry** (left-right symmetry, like most animals and human beings). Without these aspects, it could be difficult to tell much about its shape

041 Make a Commitment to Symmetry or Asymmetry

Medusa Sketch

Symmetry and asymmetry as **design statements** tend to be more successful when they are clear and definite aspects of your characters. This preliminary sketch of a Medusa-like figure is an example where it has yet to be decided which way to go in that respect. The headdress is a primary element here, but it is not yet clear if the design is meant to be symmetrical or asymmetrical. To move forwards with this, my strategy would be to **refine the shape** of the headgear so that it is clearly one or the other. Leaving **ambiguity** in terms of symmetry just makes it appear as though you have made errors, or that you weren't able to draw accurately enough to show symmetry in the design.

Warrior

Human standards of beauty usually depend on faces and bodies exhibiting clear left-right (bilateral) symmetry. This is a useful point to remember, even if in real life people rarely exhibit perfectly symmetrical features. In the field of entertainment design, the tendency is to portray **ideals and extremes** in character design for the sake of clarity – people are either idealized and beautiful, or very grotesque and scary. Physical symmetry is a visual cue among human beings that suggests health, vigour and attractiveness. Reinforcing this with symmetry in the costume design as well, as in this illustration, can help to convey the message of **physical perfection**.

043 Try Deliberate Asymmetry

Kettle Head

If you are including asymmetrical elements in your character, it is better to be definite about them.

Asymmetry as a design statement can create interesting **visual tension**. A design based on symmetry can have a rigid feel, whereas adding a component that clearly favours one side or another adds a certain dynamic, off-balance quality. The main thing to remember is that making something very subtly asymmetrical just looks like you have made a mistake, so you need to **make it obvious**. In this illustration, the difference in size of the character's arms is emphasized as much as possible. The feeling of tension comes from the effort of the character to compensate for the weight of the large arm by leaning over to the other side. This character would not fit the standard definition of beauty, but is far more interesting as a result.

The arm with no hand is the more muscular one, as this character uses interchangeable mechanical prostheses on his stronger arm, requiring more muscle mass to move the heavy armatures around.

All of these characters are more or less symmetrical when viewed from the front

Normal human features combine with artificial elements such as fabrics, armour and jewellery

Work back and forth between front and side views

Head Studies

As these quick sketches show, designing heads in profile can free you up to **explore different shapes** without being bound by the constraints of symmetry. Trying to draw perfectly symmetrical and orderly faces can get in the way of building up a catalogue of ideas through initial thumbnail sketches and design iterations. Doing numerous drawings with this type of **freedom** is a great way to get the mind going, stimulating the thought process for other designs and illustrations.

045 Grasp the Keys to Expression

Establishing a Process

Nosferatu

The eyes are said to be the windows to the soul. In an illustration, the eyes and eyebrows are some of the key tools for **conveying personality**. In its most basic form as a classic smiley face, the eyes and mouth can convey a wide range of expressions. As this illustration shows, adding eyebrows increases the **emotional vocabulary** immensely. One thing to note is that the eyes and eyebrows are rarely symmetrical

in real life. In fact, without asymmetry in this area, faces tend to feel somewhat artificial and lacking in expression. This is an instance where you definitely want to introduce a bit of asymmetry in order to produce a convincing character. The mouth shape of the vampire in this illustration highlights the asymmetrical nature of the eyebrows, opening up the **expressive potential** of his face.

Drow Inquisitor

In entertainment design projects, such as games, comic books, or role-playing game manuals, characters often come to be closely identified with logos, graphics or certain key colours. Creating a **clear association** with a specific colour or icon is a simple but effective way of adding another dimension to your characters. Comic-book superheroes are a good example of this technique – certain superhero characters are directly associated with their logos, or particular colour combinations that echo their costume designs. In this illustration of a drow elf, I wanted to set up the deep red colour as part of her **visual identity**. Keeping the rest of the image relatively monochromatic and desaturated helped to establish the red as a distinctive design element. The colour is picked up again in the eyes of her familiar as well as in her staff.

047 Create Connections

Drow Elves

A number of individuals can be shown to be members of a group or alliance through the use of **common design elements** in clothing or equipment, similar to the way in which members of a sports team wear uniforms. In this illustration of three drow elves, each elf's armour is distinct, with different colour palettes and designs. Typically in the fantasy genre, drow elves are distinguished by spider-influenced designs, but for this particular illustration I wanted to see whether I could still convey their culture without relying on that predictable visual device. Elements such as the repeated overlapping plates and angular, downward-pointing shapes indicate that these characters are related in some way without relying on the more literal approach of covering their armour in spiders and webs.

Provoke a Reaction with the Uncanny Valley

062

Felis

The term '**uncanny valley**' was coined by a Japanese scientist named Masahiro Mori, and refers to a phenomenon that occurs when a creature or character begins to very closely resemble a human being, except for one or two key areas. The more closely something looks like a real person, the more **empathy** a viewer will feel with it, until at a certain point the resemblance is so close that any difference or irregularity feels very **disturbing**. Here, the character is realistically rendered, with just a few **subtle changes** to his physiology to reflect a cat influence. The effect causes this character to be far more unsettling than, say, the bipedal lobster character on page 85.

Artist's Tip

SOMETIMES, A DIFFERENT PIECE OF ARTWORK CAN PROVIDE SOME INTERESTING TEXTURE OR COLOUR VARIATION THAT CAN BE PASTED INTO A NEW PIECE. IN THIS EXAMPLE, I'VE TAKEN A PIECE FROM ANOTHER ILLUSTRATION (HYACINTH) AND USED IT AS A SUBTLE OVERLAY LAYER JUST TO INTRODUCE SOME TEXTURE.

063 Create a Monster: Tried and True

Vampire

One of the tasks I enjoy most in character design is being asked to create a monster. There are countless ways to approach this particular design issue, but a good way to start is to base your monster design on one of the **pre-existing monster archetypes** that most people are already familiar with, such as vampires, zombies, or some form of were creature. Examples of monsters derived from any of these prototypical archetypes can be found throughout the fantasy world and offer an excellent **source of inspiration**. One of the most well known of the monster archetypes is the vampire, which has had countless different incarnations in different entertainment media.

The character in this illustration exhibits many of the hallmarks of the traditional vampire character, such as overdeveloped fangs, pale skin and blood-red eyes.

Copyright © Wizards of the Coast, Inc.
Used with permission

Create a Monster: Skin Deep

064

Zombo

One tactic that you can employ to great effect in your monster designs involves a **purely textural or surface approach**. The example here shows a zombie (or undead/reanimated corpse – all terms for the same concept) whose silhouette is basically that of a normal human being. The anatomy is **distorted and exaggerated** to a certain degree, but the main design statement is expressed through the character's surface quality. The imagery is intended to play up the sense of decaying skin, layers of decomposing flesh and unsightly oozing fluids.

A dimensional component also exists in the irregularities of the skin, so it reacts to light in the same way as the larger forms, creating highlights and casting shadows.

065 Create a Monster: Beauty is the Beast

Driden

The 'Beauty and the Beast' concept can be applied to monster design for another disturbing effect. Combining traits commonly associated with monsters and visual cues that are normally related to beauty can result in a striking character or creature design. The Driden is a perfect example of this **dichotomy**. The face and upper body of this character is otherworldly in its colours and textures, but provides enough references to a standard definition of beauty to create a **jarring contrast** with the grotesque, insect-like lower body

Separating the 'beauty' and 'beast' components makes the different aspects easier to read, but it's important to relate the two aspects visually, providing a link through colour, textures or details.

Create a Monster: Tales of the Unexpected

066

Reincarnivore

Another approach to monster design involves arranging known elements in new ways, or **playing with people's expectations** of proportions, colours, features, limbs and so on. In this illustration, the creature's head has been replaced with a set of tentacles. With characters that have an essentially humanoid silhouette, often the first place the viewer looks to determine identity is the head, specifically the face. Substituting something else where the head should be can have a **startling effect**.

067 Create a Monster: Elimination

Beholder

An effective creature design can come out of a strategy of **eliminating important parts** of anatomy. A monster consisting of only a head, or a headless or armless creature, has a certain **disturbing quality** that probably plays on our innate revulsion for beheadings and amputations. The Beholder is a well-known creature in the realm of fantasy role-playing games. Its key visual characteristic is that of a floating, disembodied head with a single glaring eye.

Artist's Tip

ELIMINATING OR RETAINING DIFFERENT BODY PARTS CAN HAVE DIFFERENT EFFECTS IN A DESIGN. EYES ARE USUALLY IMPORTANT IN CONVEYING A SENSE OF CONSCIOUSNESS OR INTELLIGENCE. EYE CONTACT IS A VERY DIRECT WAY TO ENGAGE WITH A PERSON OR CREATURE. ELIMINATING THE HEAD OF A CREATURE RESULTS IN MORE OF A SENSE OF MINDLESS BESTIALITY.

Create a Monster: Imply Possession or Infection

068

Dolgaunt

We've looked at a few different ways in which shapes and forms borrowed from animals can be used to alter a silhouette. In those cases, the creature or character is usually something that was born or created. (One other option is to illustrate a new being that is the result of **one creature infecting or taking over another**. In a case like this, the infected or possessed character would still be recognizable, with **the horror of possession** forming the basis of the design. In this illustration, a humanoid character has been possessed by another creature that manifests as snake- and tentacle-like forms that erupt from the torso.

Maintaining the colours and textures of the original character in the 'infected' aspect implies that the fundamental genetic make-up of the victim has been altered by whatever is possessing it.

069 Exploit the 'Save the Cat' Factor

Trebla Veladova

'Save the Cat' is a concept described by screenwriter Blake Snyder in his book of the same name. It refers to an innate human characteristic in a hero that allows the audience to identify with him. This trait is epitomized in a hero who stops to save a cat on the way to an epic calamity. It gives the character an **endearing quality** that makes him a little more human, and therefore more approachable, than a character who is superhuman but who is too 'cool' to stop for the cat. This preliminary sketch for an illustration features a character who is a master of many different disciplines. The fact that he wears glasses is uncommon for a fantasy hero, but this instantly gives him the 'save the cat' factor, making him **more approachable** than the typical muscle-bound barbarian.

Hellspike Prison

Portraying a character in a specific environment helps to strengthen the story. For example, an image of a vampire in a cave-like setting surrounded by flying bats and the mummified remains of his victims reveals more than an illustration of the same vampire on a plain white background. In any image, a character with a specific story angle or personality trait often

benefits from a **visually equivalent prop**, such as a vehicle or piece of equipment that **reinforces a particular aspect** of his or her persona. In this illustration of a master of an underworld prison, a sculptural obelisk in the background echoes some of the shapes of the main character, and provides some emotional storytelling support in the expressions of the faces carved on it.

071 Add a Faithful Steed

Developing the Character

Knight of the Flying Hunt

Often a character gains much of its visual impact and memorable quality by being associated with some sort of **large domesticated animal**, whether as a means of transportation or just as a travelling companion. In this illustration, the overall impression references the mounted knights who participated in medieval jousting tournaments. The addition of the wings to create a Pegasus brings the character into the fantasy realm. This particular character set-up has the added advantage of having a **very distinct silhouette**, recognizable even from far away.

Copyright © Wizards of the Coast, Inc.
Used with permission.

Incorporate an Iconic Symbol

072

The Soft Claws

A character can often be represented by some sort of unique prop or piece of equipment that bears a distinctive symbol or graphic icon. This could take the form of a religious artefact or a specific tool that indicates the character's primary activity. Other examples of this idea in the fantasy realm include **flags, banners, shields and crests**, all of which can immediately **convey important information** to the viewer. In this example, a banner for a secret organization known as the 'Soft Claws' reveals its purpose of keeping watch over communities for signs of orc and dragon activity. Its leader is a dragon who takes the form of a human woman. The wings and eyes symbolize her role in watching over the townspeople, gathering intelligence, and if necessary flying to their aid.

Copyright © Wizards of the Coast, Inc.
Used with permission.

073 Use Weapons as Design Tools

Copyright © Wizards of the Coast, Inc.
Used with permission

Axe Wielder

A memorable character can be created using weapons as a starting point. In science fiction and fantasy art many iconic characters are identified by their equipment and armour. Most commonly, these take the form of oversized hardware or multiple blades that **accentuate an aggressive appearance**. If a weapon is unusual or prominent enough, it can be used to form a significant aspect of a character's silhouette. In this illustration the warrior carries a large battleaxe with a distinctive double-bladed shape. From this, a secondary design characteristic has been picked out in the form of small and spiky triangular shapes that occur at regular locations on his armour.

Show the 'Unexpected Reveal'

074

Copyright © Wizards of the Coast, Inc.
Used with permission

Althanis, Cleric of Dagon

Sometimes it can be dramatic to illustrate a **moment of revelation** in a story; for example, the instant a character who was thought to be human is shown to be actually part creature. This 'unexpected reveal' can inspire a dynamic image, but caution is needed. This device is a '**one liner**' that only works at a particular point in a story and should not be depended on to build a character. Design-wise there needs to be something more to avoid creating a one-dimensional role. In this illustration, the cleric is revealed to be sprouting tentacles from his body. Rather than rely on this as the main design motif, I've also included **thematic elements** of marine life – both real and mythical – in his armour and in the altar before him.

075 Use Overt References to Pinpoint a Character

Sacrificial Altar

In certain situations you might be called upon to base an illustration on an actual culture, location or historical figure. This practice has some inherent risks such as mentally pulling the viewer out of the fantasy world you are trying to create. However, one major advantage is the **built-in recognition factor**. You can establish some **common ground** with a viewer easily by relying on imagery that to some degree they are already familiar with. The giant involved in a sacrificial rite in this illustration takes design and visual cues from ancient Central American cultures in a very direct way, making him unmistakably Aztec in origin.

Some of the patterns and colour choices in the giant's headdress are borrowed from the design of an Aztec priest's garb.

Use Subtle References to Evoke a Theme

076

Rothan

While using overt references can instantly identify a character (see page 100), using **subtler signs** can create more of a general impression without sending such an explicit visual message. This illustration makes certain **allusions** to Middle Eastern cultures, but not obviously to any one in particular. Elements of the costume design and colour palette also suggest the medieval era, introducing a general feeling of antiquity. The overall result is largely exotic, but in a way that does not specifically reference a given ethnicity or time-period

The main components of the costume design are blocked in first, leaving details and spot colours for later. The loose, flowing robes and protective headgear elements are borrowed from the native clothing of countries in the Middle East.

Copyright © Wizards of the Coast, Inc.
Used with permission.

Provoke a Reaction with the Uncanny Valley

062

Felis

The term '**uncanny valley**' was coined by a Japanese scientist named Masahiro Mori, and refers to a phenomenon that occurs when a creature or character begins to very closely resemble a human being, except for one or two key areas. The more closely something looks like a real person, the more **empathy** a viewer will feel with it, until at a certain point the resemblance is so close that any difference or irregularity feels very **disturbing**. Here, the character is realistically rendered, with just a few **subtle changes** to his physiology to reflect a cat influence. The effect causes this character to be far more unsettling than, say, the bipedal lobster character on page 85.

Artist's Tip

SOMETIMES, A DIFFERENT PIECE OF ARTWORK CAN PROVIDE SOME INTERESTING TEXTURE OR COLOUR VARIATION THAT CAN BE PASTED INTO A NEW PIECE. IN THIS EXAMPLE, I'VE TAKEN A PIECE FROM ANOTHER ILLUSTRATION (HYACINTH) AND USED IT AS A SUBTLE OVERLAY LAYER JUST TO INTRODUCE SOME TEXTURE.

063 Create a Monster: Tried and True

Vampire

One of the tasks I enjoy most in character design is being asked to create a monster. There are countless ways to approach this particular design issue, but a good way to start is to base your monster design on one of the **pre-existing monster archetypes** that most people are already familiar with, such as vampires, zombies, or some form of were creature. Examples of monsters derived from any of these prototypical archetypes can be found throughout the fantasy world and offer an excellent **source of inspiration**. One of the most well known of the monster archetypes is the vampire, which has had countless different incarnations in different entertainment media.

The character in this illustration exhibits many of the hallmarks of the traditional vampire character, such as overdeveloped fangs, pale skin and blood-red eyes.

Copyright © Wizards of the Coast, Inc.
Used with permission

Create a Monster: Skin Deep

064

Zombo

One tactic that you can employ to great effect in your monster designs involves a **purely textural or surface approach**. The example here shows a zombie (or undead/reanimated corpse – all terms for the same concept) whose silhouette is basically that of a normal human being. The anatomy is **distorted and exaggerated** to a certain degree, but the main design statement is expressed through the character's surface quality. The imagery is intended to play up the sense of decaying skin, layers of decomposing flesh and unsightly oozing fluids.

A dimensional component also exists in the irregularities of the skin, so it reacts to light in the same way as the larger forms, creating highlights and casting shadows.

065 Create a Monster: *Beauty is the Beast*

Driden

The 'Beauty and the Beast' concept can be applied to monster design for another disturbing effect. Combining traits commonly associated with monsters and visual cues that are normally related to beauty can result in a striking character or creature design. The Driden is a perfect example of this **dichotomy**. The face and upper body of this character is otherworldly in its colours and textures, but provides enough references to a standard definition of beauty to create a **jarring contrast** with the grotesque, insect-like lower body

Separating the 'beauty' and 'beast' components makes the different aspects easier to read, but it's important to relate the two aspects visually, providing a link through colour, textures or details.

Create a Monster: Tales of the Unexpected

066

Reincarnivore

089 Make the Character an Active Player

Spy Games

A character actively performing a task can engage the viewer more intensely than a figure in a plain standing pose. Taking advantage of a storytelling opportunity adds **layers of information** to a character beyond simply what he wears or carries. Placing a character in a location where there is clearly a significant event taking place can add **depth and a degree of realism** to the portrayal. A specific action, such as in this image of an elf obviously involved in some act of espionage, makes a great basis for an illustration.

Being able to read some degree of intent or emotion in the character's face as he performs his action is another tool in depicting a living, breathing character.

Dragon by Wondolite Design, Inc.
Used with permission

Tiamat's Wrath

Placing a character in a hostile or threatening environment can be the starting point for an effective illustration. Showing how adventurers come to find themselves in a dangerous or menacing situation is a staple of the fantasy gaming genre, and visualizing a typical climactic event such as this can help **bring the story to life** for the viewers. In this illustration, a group of explorers find themselves threatened by a manifestation of Tiamat, a multi-headed dragon creature, appearing through a mystical portal above them. The scale of the threat is magnified by the **upward angle of view**, emphasizing the size of the creature. The adventurers are almost the smallest elements in the scene, again **highlighting the scale** of the danger they face.

Artist's Tip

SOMETIMES IT CAN BE HELPFUL TO DESIGN A SPACE PRIOR TO LAYING OUT THE ILLUSTRATION, ESPECIALLY WHEN ONE OF THE MAIN CONSIDERATIONS IS SETTING UP AN EPIC-FEELING SITUATION. THINK ABOUT WAYS TO EMPHASIZE A GRAND SENSE OF SCALE, THROUGH THE USE OF OVERSIZED ELEMENTS, LIGHTING EFFECTS OR CAMERA ANGLES.

091 Use Lighting for Focus

The Massacre at Drellin's Ferry

Lighting can be used to tightly control the area of contrast in an image, and in so doing provides you with another useful tool for focusing attention. The viewer's eye will be naturally drawn to the brightest areas in the scene, or the areas showing the **greatest contrast between light and dark**. In this illustration of a large-scale attack, there is no single character that is the focal point. Instead, the main impression is intended to be the moments soon after an all-out attack on a settlement by an army of giants, dragons and other creatures. The lighting in the scene is used to create an area of highest contrast along the line of buildings in the distance, creating a focal point that **supports the story element**.

The main light source is the city on fire, which has then been used to 'rim' light many of the characters and components in the scene, helping to separate them from the background.

Copyright © Wizards of the Coast, Inc.
Used with permission.

Ruins of Dorasharn

The use of lighting to create or enhance mood is itself a huge area of study, but there are some basic concepts you can take advantage of for fantasy illustration. Creating **spots of interest** in a dim environment with isolated light sources can create a feeling of mystery. Light coming from a strong sideways direction also tends to boost the **sense of drama** in a scene. In this illustration, a distinct foreground/background relationship is set up by contrasting warmer, redder light in front against the cooler shafts of downlight in the middle ground. The beams of light **frame the character**, adding to the sense of isolation. The flowing magma in the background creates uplighting on the giant statues, emphasizing the feeling of danger.

The lighting on the giant statues in the background of the scene plays up the sense of suspense and danger, and the high contrast helps draw the viewer's eye.

093 Make Your Subjects Work for You

Behold the Lost King

There are many different ways to arrange elements in your illustrations for compositional purposes. One option is to use your characters to literally shape the image. Using **lines of sight, body language and physical interaction** is an alternative to other composition techniques that rely on 2D design (such as shapes, arcs, value changes, etc.) The character in the centre of this illustration literally points towards the undead king in the background, reinforcing him as the **centre of focus**. Additionally, elements in the landscape support the idea by pointing in the same general direction.

Copyright © Wizards of the Coast, Inc.
Used with permission

Show a Character Looking Off Screen

094

Brenvol

In an illustration, especially a simple one with a single character and no background, **directional 'weight'** in a composition can be established when a character looks off screen or off page. This creates a **psychological expectation** in the viewer, who instantly wants to know what the character is looking at, and generates an unseen 'presence' in that direction. Adding a distinct **facial expression**, whether of fear, anticipation, desire, horror, or something else can add to that sense of expectation. In this case, by manipulating the lighting so that the character's face receives most of the light, the off-screen gaze is made the focal point, details of the costume lower on the body are played down by virtue of the lighting design.

Artist's Tip

GENERALLY, WHEN ILLUSTRATING SINGLE, STANDING CHARACTERS, MY PREFERENCE IS TO HAVE A MID-TONE BACKGROUND SO THAT I HAVE THE OPPORTUNITY TO GO LIGHTER OR DARKER WITHIN THE CONFINES OF THE CHARACTER AND PLAY AGAINST THE MIDDLE TONE. WITH A PLAIN WHITE BACKGROUND SUCH AS THIS, IT CAN BE MORE OF A CHALLENGE TO AVOID MAKING THE CHARACTER'S COLOURS FEEL TOO DARK. ON THE PLUS SIDE, CREATING A SILHOUETTE EFFECT (AS IN THE LOWER HALF OF THE CHARACTER'S BODY) IS EASIER TO DO.

095 Balance Visual Weight Through Colour

Races of Eberron

Colours relate to each other in certain ways, depending on where they fall on the Colour Wheel (see page 25). Brighter, more saturated colours tend to **advance forwards**, whereas the darker ones recede and **sink backwards**, particularly when they are placed next to each other. There are some interesting explanations for this phenomenon; one is that the iris of the eye reacts to vivid colours in a similar way that it reacts to bright light, by shrinking the aperture of the eye

slightly. Whatever the explanation, it is a tendency of the human eye that you can take advantage of when planning colour compositions. By modulating the **amount and saturation** of the reds in this illustration, I have made the background graphic feel more intense and weighty towards the bottom, increasing in lightness as it rises to the top. This echoes the idea of the stout, burly dwarf character down low, progressing up towards the lighter, paler character.

Copyright © Wizards of the Coast, Inc.
Used with permission

Balance Visual Weight Vertically

096

Draw High Priestess Sketch

A strange quirk of human perception is that we tend to perceive more weight towards the bottom of a vertical figure or composition; a vertical line that is evenly bisected will appear top-heavy. A simple vertical shape or composition actually feels more pleasing when the bisection point is **slightly higher than the halfway point**. Applying this phenomenon to character illustration, an **idealized figure** will be proportionately longer in her lower body than she would ordinarily be in real life.

Contrasting an area of relative detail with a darker, taller, less detailed shape – like this long skirt – slims the character. The darker visual mass of the lower half of her body helps to emphasize the sense of verticality.

Copyright © Wizards of the Coast, Inc.
Used with permission

097 Enter Stage Left

Money Well Spent

In most western cultures, viewers tend to 'read' a scene from **left to right**; because of this fact objects and characters on the right-hand side of a composition tend to carry more visual weight. There are many different tricks and techniques used **to guide a viewer's eye** across and through an illustration, but this is a built-in propensity of the human eye that you can easily use to your benefit. In this image, a hired band of mercenaries protects a merchant, fighting off a group of armed brigands. I've relied somewhat on the left-to-right read of the scene to help tell the story, with the movement of the eye ending on the main character of the story, the female half orc swinging her axe.

Copyright © Wizards of the Coast, Inc.
Used with permission

Create Depth by Overlapping

098

Aereni Trio

A simple visual communication concept is that of overlapping forms. It might seem an obvious thing to more experienced artists, but the act of placing some characters or objects in front of others is an easy way to **create a sense of depth** in your illustration and **establish spatial relationships** between the elements in your scene. In this image the composition is fairly clean – three characters stand together with a very plain background. By overlapping elements from all three characters, I have established who is in front, who is in the middle and who is at the back. This adds a sense of depth – albeit limited – and makes the image more dynamic than simply presenting the three characters in a line with no intersecting shapes.

When working with overlapping characters pay attention to the edges – in some less important areas it's fine to 'lose' the edges. A viewer's eye naturally tends to fill in these lost edges and this can actually help make the image more engaging.

Used with permission

099 Create Hybrid Art

Ogre

Most of the character and creature renderings in this book were completed in Photoshop, using digital painting tools and a few filter effects. There are also a few examples of images created purely traditionally, mostly some combination of pencil, ink and markers. **Using digital tools to enhance traditional media** allows you to enjoy the strengths of both media, and to combine them for interesting effects that would be difficult to obtain using one or the other by itself. This ogre character was drawn in my journal. A simple colour pass and subtle lighting effects were added in Photoshop, **preserving much of the hand-drawn feel** of the original sketchbook image.

Digital painting programs have come a long way and can be used to create impressive results. However there is still a certain charm about a hand-drawn line that computer software is not yet able to capture successfully.

Experiment with all the Tools at Your Disposal

100

Dungeon Master Screen

I want to end with an example of a piece that incorporates many if not all of the 'ways' in this book. This large-scale piece was commissioned by Wizards of the Coast as a four-panel cover for a printed gaming product. As it involved many different types of characters, some of which I was not familiar with, it required considerable preliminary **research, sketches and studies**. The composition became a design task in itself, as I had to come up with different mechanisms to justify the lighting and colour palettes that I wanted to use. The layout sketch reproduced below shows the rough arrangement I ended up with, which formed the basis for the different 'zones' of colour. These zones were designed to break up the odd proportions and provide some **visual rhythm** as your view pans across the

scene. Each of these zones then had to have a **logical lighting scheme** of its own to justify the colour palettes.

The point here is that creating a successful finished illustration is not an exact science. We have looked at a large number of methods to create characters, refine designs, compose illustrations and to communicate the right information to the audience. Any one technique by itself will probably not result in a perfect image (if there is such a thing). As you form your own work habits, rather than relying on just one way or making a habit of using a handful of 'favourite' techniques as a crutch, **constantly try to use different ways** and combinations of ways – some will work for certain kinds of illustrations and some won't.

100 ingenious techniques for designing and creating amazing fantasy figures

Concept designer Francis Tsai presents an exciting range
of imaginative figures, with clear guidance on how
to draw and paint your own

Here you will discover how to research and render a successful
character, create mood using costumes, props and backdrops, and
use design strategy to communicate successfully with your audience

Each technique is accompanied by striking images, artist's tips
and practical bite-sized information to inspire you on your path
to becoming a successful fantasy artist
